

FLOOR TO CEILING

Description

Floor-to-ceiling tenant storage lockers feature 9' to 12' high floor-to-ceiling posts. All panels and transoms are made of 6GA & 8GA 2"x2" galvanized welded wire mesh and do not require angle frame. This innovative design allows for any necessary trimming around water pipes, wall irregularities and obstructions to be done right on-site, eliminating costly installation charges. Doors are made of framed 2"x2"x10GA welded wire mesh with a powder coated tough paint finish. Posts are equipped with adjustable foot and ceiling plates for added stability on uneven surfaces. When necessary, optional extend panels are available up to 4' high to reach the structural ceiling of your building.

* Padlock hasps and door stoppers come standard with all single tier tenant storage lockers.
