

## SELF-CLOSING SAFETY GATE

### Description

Cogan's self-closing safety gate serves as an additional security option to guard the opening on a mezzanine ladder entryway.

Spring-loaded hinges ensure our safety gates close automatically. Gates cannot be left open by accident, therefore providing constant visual indication of the access point. Workers will be deterred from walking directly into the opening, reducing the likelihood of trip or fall accidents and other hazards.

The symmetrical design means safety gates can swing from either left or right. Safety gates are adjustable in width from 24" to 36" to accommodate standard ladder openings.

All self-closing safety gates are sealed in a durable, powder-coated safety yellow paint finish for maximum visibility.

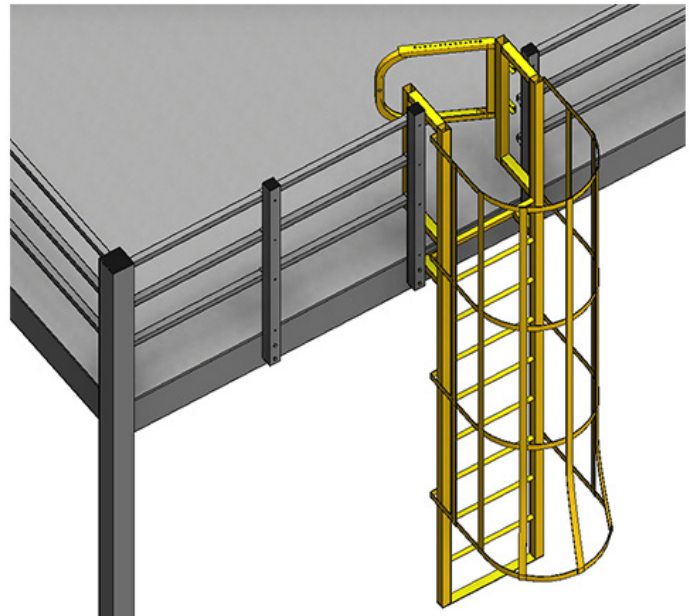

## PRODUCT INFORMATION

### Specifications

Stair Opening Width	24"-36"
Sizing	Adjustable Length
Finish	Powder-coated
Closing Method	Spring Loaded, Self Closing

COLORS 

  
Safety Yellow
