### SELF-CLOSING SAFETY GATE

#### Description

Cogan's self-closing safety gate serves as an additional security option to guard the opening on a mezzanine staircase entryway.

Spring-loaded hinges ensure our safety gates close automatically. Gates cannot be left open by accident, therefore providing constant visual indication of the access point. Workers will be deterred from walking directly into the opening, reducing the potential for trip accidents and other staircase hazards.

The symmetrical design means safety gates can swing from either left or right. Safety gates are available in two adjustable sizes from 24"-36" and 33"-48" to accommodate most standard staircase openings.

All self-closing safety gates are sealed in a durable, powder-coated safety yellow paint finish for maximum visibility.

## PRODUCT INFORMATION

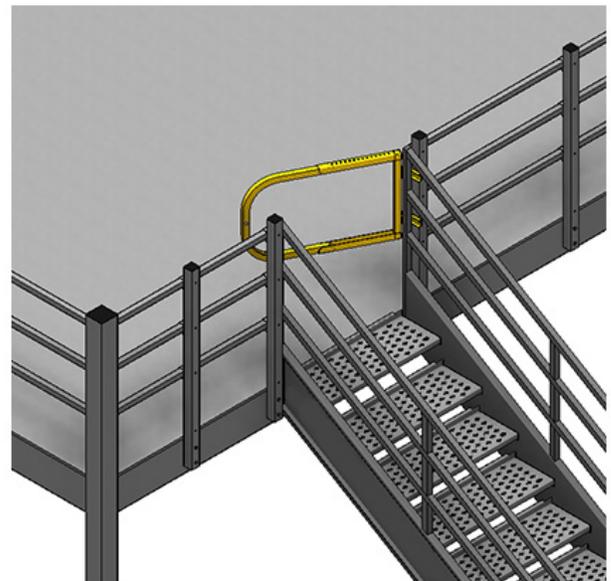

### Specifications

Stair Opening Width	24"-36", 33"-48"
Sizing	Adjustable Length
Finish	Powder-coated
Closing Method	Spring Loaded, Self Closing

COLORS

Safety Yellow
